Abstract (en)

[origin: EP0443608A1] The invention relates to a seal (12-1), constituted by a water-expansible portion (13-1) and a water-unexpansible portion (14-1), for preventing water from leaking in a construction joint. The expansible portion (13-1) surrounds the unexpansible portion (14-1) everywhere except on a side of the unexpansible portion (14-1) which is adhered to one of two mutually facing surfaces of the construction joint. The unexpansible portion (14-1) is sized, relative to the overall size of the seal (12-1), particularly in the width dimension, so that it adheres with sufficient strength to one of the mutually facing surfaces of the construction joint so as not to become pulled off in use. An effective seal thus is maintained even in a swollen state. <IMAGE>
