Abstract (en)

[origin: EP0443691A2] The invention relates to a method for setting a wire in contact with a plastic film. In particular, the method relates to setting a resistance wire in contact with such a plastic film which is intended for use in a laminated glass manufacturing process as an intermediate film for laminated glass. When applying the method, a plastic film (9) to be provided with a wire is laid upon an endless surface such as a drum (4). The base structure is set in motion relative to elements (17) producing a waveform on the wire as well as elements (19) setting the wire into contact with a plastic film. This is effected by means of a supply frame (3) which carries said elements (17), and (19). The invention relates also to an apparatus for applying the method. <IMAGE>
