Abstract (en)
[origin: WO8912900A1] A method is described for the production of wiring harnesses, especially using the crimping system, in which socket casing holders are arranged on a jig, between which the individual wires are held using "jig attachments". The invention is remarkable owing to the combination of the features below: the socket casing holders are arranged in a line on one lateral surface of the jig and the attachments are arranged on the actual working surface; the jig is moved in at least one direction; the attachment of at least one end of a wire to the contacts is effected by moving the jig by means of a fixed securing device.
