Abstract (en)

[origin: WO9005819A1] A method and apparatus for making a floor or walkway for providing a temporary working surface for building or decorating or other purposes comprises providing support means for conventional building planks. The support means (16), (18), holds the planks in a generally T-shaped configuration so that the horizontal plank (12) provides the working surface and the vertical plank (22) provides vertical stiffness to support loads on the working surface. Embodiments include support structures in the form of a height-adjustable steel fabrication and a plastics moulding.
