Abstract (en)
[origin: EP0444238A1] In a watch strap with a fastener having fastening elements engaging in one another in a catching manner, a solution is to be provided, with which a watch strap with a fastener is provided, in particular for high-quality watch straps, which has an optimum catch property whilst guaranteeing at the same time that different widths are also covered by the identical closure when the fastener has once been mounted on the watch strap in order to be able to avoid both readjustment and changing the watch strap with the fastener in order to be able to fit the watch strap to thinner and broader arms. This is achieved in that a fastening element (4) is fitted with an engagement tab (5) with teeth or corrugations (7) at the edge, whereas the corresponding fastening part (8) is equipped with a catch pin (12) engaging in the teeth or corrugation crevices, at least one closure element being subjected to the force of a spring in the engagement direction. <IMAGE>
