Abstract (en)

The invention discloses a glass-securing shaped channel comprising a basic profile (2, 51, 61, 87, 97, 98) presenting in its transversal cross-section an open shape, at least a closing profile (3, 37) consisting of a profile having an open shape in its transversal cross-section, eventually a stopper profile (4, 40) presenting a closed shape in its transversal cross-section, wherein the securing of the glass pane (8, 81, 86, 92) within the glass-securing shaped channel is obtained by the adhesion of the opposed surfaces of the glass pane against the lips (23, 35) belonging to the basic profile (2, 61, 51, 87, 97, 98) and to the closing profile (3, 37), when said closing profile is permanently joined together with the basic profile (2, 61, 51, 87, 97, 98) through a snap junction. <IMAGE>
