Abstract (en)
A slatted base for seating and reclining furniture, provided with supporting bodies (1) of a resilient material which receive the ends of slats (5) extending parallel to each other, each supporting body (1) having in a lower part two recesses (8) for receiving the ends of connecting means and in an upper portion being provided with means for receiving the ends of said slats (5), whereas the upper part of the two supporting bodies is provided with holes (7) for receiving the ends of upper slats (5), and that the connecting means are formed by additional lower slats (6) extending between the supporting bodies (1) and being located below the upper slats (5), whilst the central part located intermediate the lower part and the upper part of a supporting body is provided with recesses (9, 10, 11), whose longitudinal axes extend at least substantially parallel to the slats, and the supporting bodies, which are lined up one behind the other when seen in the longitudinal direction of the slatted base, are pivotally coupled together by means of pivot axes extending parallel to the slats. <IMAGE>
