Abstract (en)
A holder (100) for at least one elongate article comprises a clamping member (103) and a resilient membrane (106) stretched over it. When no article is disposed in the clamping member (103), the membrane (106) is clear of the clamping member (103) and exhibits a tight appearance. For seating an article, the membrane (106) is pressed into the clamping member (103). <IMAGE>
