Abstract (en)

[origin: US5139168A] The flexible pouch (2) contains a semi-rigid component (6). The relative dimensions of the pouch (2) and the semi-rigid component (6) are such that the component (6) cannot move into a position in which its median plane would be perpendicular to the output axis of the product being dispensed. The component (6) can be free or fixed to the outlet pipe for the product to be dispensed. The component (6) defines flow channels for the product being dispensed from the bottom of the container towards the outlet pipe for the product.
