Abstract (en)  
[origin: EP0445571A2] The invention relates to a shower partition with at least one or two partition walls which may be connected together from sections with retaining members, at least one of which partition walls works together with at least one retaining member designed as an articulated member with an axis running outside the partition wall. The retaining members may be connected on the one hand with the partition walls and on the other hand with the floor, ceiling or wall of the room which includes the shower partition. The axis is arranged at a distance both from the wall and from the partition wall.
