Abstract (en)
Assembly for securing swing doors (16, 17) of a cargo space like a loading space of a truck or a container, comprising a door locking means (1) which is designed to extend during use within the swinging range of the door means and which comprises a locking body (2) provided with at least a first securing means (25, 26), also comprising for each first securing means a fixed second securing means (12, 8, 9) like a corner fitting (12) of a container, which is located out of the swinging range of the doors and is suitable to be in securing engagement with the related first securing means during use. The locking body (2) is formed and supported by the securing means such as to extend freely from the doors during use. The locking body may be formed as a two-part brace, wherein the two brace members (4, 5) may be interlocked after the first and second securing means have been brought into securing arrangement with one another. <IMAGE>
