Abstract (en)

After having machined a spot facing (4), the bottom of this spot facing is pushed back by means of rollers (31) driven in an orbital movement, the angle which the attack surface of the rollers forms with the axis (Y-Y) of the opening (2) being progressively reduced in step with the advance of the roller carrier (28). <??>Application to the formation of connection lips around openings of a vessel shell ring (course) of a nuclear reactor. <IMAGE>

Abstract (fr)

Après avoir usiné un lamage (4), on repousse le fond de ce lamage au moyen de galets (31) entraînés en mouvement orbital, l'angle que la surface d'attaque des galets forme avec l'axe (Y-Y) de l'ouverture (2) étant progressivement réduit au fur et à mesure de l'avance du porte-galets (28). Application à la formation de lèvres de raccordement autour des ouvertures d'une virole de cuve de réacteur nucléaire. <IMAGE>
