Abstract (en)
[origin: EP0446134A1] The aerosol-generating device, of the sprayer type having a rotating disc, comprising a plane disc (1), dish or axisymmetric member rotating at high speed, a tube (4) for supplying the liquid to be dispersed or a liquid reservoir fitted at its base with an orifice which emerges at the centre of the axisymmetric member or in its vicinity, being able to comprise concentric obstacles disposed on the surface of the axisymmetric member, and of the type in which the rotational speed, the dimensions of the rotated member and the liquid flow rate define operating conditions such that fluid jets are formed around the periphery of the rotating member, the device being characterised in that it comprises means for disturbing the flow of the liquid to be dispersed which generate a capillary wave propagating towards the periphery of the rotating member. Application to experimental research, to agriculture. <IMAGE>
