Abstract (en)

[origin: EP0446430A1] The invention relates to a shaving head, in particular a razor blade unit, arranged at the front end of a handle of a wet shaver, having a plastic housing which possesses a front guide strip and a rear covering cap and in which a razor blade is embedded, a separate sliding strip being arranged on the covering cap. To develop the known shaving head in such a way that a more gentle shave is thereby made possible, the invention proposes that the covering cap be formed substantially exclusively by the sliding strip. <IMAGE>
