Abstract (en)
Exhauster for hair pellicles and nits, essentially characterized in that it comprises a streamlined body (1) easy to manipulate and comprising internally an electric micro-motor (2) on the shaft of which is coupled the hub (3) of a centrifugal turbine (4), determining an axial vertical exhaustion mouth (5) and a radial outlet conduct (6) to which a filtering cartridge (7) is adapted as a collector of the exhausted particles, and interchangeable thanks to a cover which defines a housing (8) with end openings (9) for the discharge of air, this exhauster presenting the particularity that the exhaustion mouth (5-10) forms the coupling casing for an interchangeable series of brushes and combs (12) which present grooves between their points for passing of the particles located between the hair, so forming an effective treating means for cleanliness of hair with a double function of brush or comb, and of exhaustion or collection of pellicles, dust, pollution or nits, by using the brush or comb appropriate according to each case.
