Abstract (en)

A carton accommodating a plurality of articles, such as bottles (B), which carton comprises a top (12, 24), a base (18) and a pair of spaced side walls (14, 16; 20, 22) interconnecting the top and the base and end wall panels (38, 42, 44; 40, 46, 48) connecting together the side walls and the base at opposite ends of the carton. Tear away strips (50, 52) are provided for detaching upper portions of the carton from lower portions thereby leaving the articles accommodated in a tray structure comprising lower portions of the side walls, the base and the end wall panels. The base is formed with a plurality of openings ("S") each to receive a top portion of one of the bottles so that the bottles can be retained together in a group by co-operation of their tops with said tray. <IMAGE>
