Abstract (en)  
[origin: EP0373469A2] Multicolour-striped strips of toothpaste, in particular with a cross-section in the form of an n-sided polygon, where n is a whole number between 3 and 7, can be extruded from a reservoir, without diffuse transition regions, if the ratio of the liquid limits of the carrier material and of the stripe material is approximately 1.10 : 1 to 1.20 : 1. A suitable extruder is shown in Figure 1.

Abstract (fr)  
On peut obtenir des boudins de pâte dentifrice à raies multicolores, ayant notamment une section transversale à n angles, où n représente un nombre entier compris entre 3 et 7, qui sortent d'un réservoir sans former des zones de transition diffuses, lorsque le rapport entre les limites apparentes d'élasticité de la masse principale et de la masse des raies est compris entre 1,10 : 1 et 1,20 : 1. Un dispositif distributeur approprié est illustré dans la figure 1.
