Abstract (en)

[origin: EP0447660A1] A data bus connection (11) for data processing installations has a screened, coaxial connector, preferably one having two internal conductors (25, 50), in the case of which a contact is operated when the plug is connected, which contact short-circuits the two inner conductors (25, 50) to one another when the connection is decoupled. In the case of the embodiment, a resistor can also be connected between the internal conductors (25, 50) and the screen (15). In this way, when an apparatus is uncoupled, the data cable is either provided with a terminating resistor or is looped through. <IMAGE>
