Abstract (en)

[origin: EP0447853A1] A feed device (22), which has a plurality of compartments (23) inclined slightly towards the rear relative to the vertical, is provided for shredding computer printouts which are in the form of web piles (26) folded in a zigzag manner. The webs (17) are drawn from the piles (26) located in said compartments via the web guide (33) formed by the respective front edge of the compartment. A projection (29) formed by a wire bar holds the pile back when it is pulled along upwards during the drawing-off. <IMAGE>
