Abstract (en)

[origin: EP0447944A1] In a fire protection flap comprising a frame (1) with an air penetration opening and a pivoting flap (5) located in the frame (1), which flap is adjusted more or less to fit the cross-section of the frame (1), the pivoting flap (5) should be provided at least partially with a sealing element or material (26) at the edge which expands or foams at increased temperature. Furthermore at least one stop bracket (27 or 28) is allocated to the pivoting flap (5) in its closed position, which at least partially seals the pivoting flap (5) from the frame (1). <IMAGE>
