Abstract (en)
[origin: EP0449040A1] The invention concerns a floor covering, particularly for open spaces and the floors of halls, with a substructure made of a hardenable or settable material, as well as metallic cover plates. According to the invention, the cover plates (2) have on their periphery moulded-on anchoring elements (3) which engage with one another in a dentiform manner and which are folded downwards at an acute angle (α), being anchored in the hardened or set substructure (1). <IMAGE>
