Abstract (en)

[origin: EP0449062A1] The present invention relates to a method for the construction of pallets to be used as supports for the handling and transport of salesgoods containers particularly of large dimensions and heavy weight. The pallets are adapted to be returned to the shipper for being reused, thanks to their compact construction resulting from their being composed of a plurality of substantially identical, separate support elements (15,16,17) disposed substantially parallel to one another at substantially equal spacings, and provided on their top faces with abutments (8) for the releasable retention of the bottom flaps (11) of the container (2) to be transported. <IMAGE>
