Abstract (en)

[origin: US5144713A] The invention relates to a hand-operated wiping instrument for floors. The wiping instrument comprises a frame 1 with support and guide rollers 5, arranged at the front in the direction of movement F, and a wiping strip 7 arranged after said support and guide rollers in the direction of movement. The frame 1 supports a guide pole 3 with a handle 4 which is located in a plane A perpendicular to the direction of movement F, the distance a of which plane from the wiping strip 7 is substantially smaller than the distance b of the wiping strip 7 from the support and guide element 5. A wiping instrument of this type can be easily handled with a good wiping effect because the wiping strip is dragged and not pushed.
