Abstract (en)
[origin: EP0449246A1] The hose reeling device has a housing (1) in which a hose drum (5) and a braking device (26) are accommodated. The braking device (26) secures the hose drum (5) in the braking position against rotation in the unwinding direction of the hose. The hose drum (5) is secured frictionally against rotation in the unwinding direction (A) by the braking device (26). This frictional brake permits a compact design and low-noise operation of the hose reeling device and allows the hose (39) to be paid out to any desired length. <IMAGE>
