Abstract (en)  
[origin: EP0449315A2] The invention relates to a handle (1) in the form of a round hook for umbrellas, in particular walking-stick length umbrellas, and is intended to achieve individual gripping profiles, while making use of structurally simple means. This is achieved by means of a slide (Sch) which is guided in the inner arc (5) of the hook (3) and forms a secant-shaped bearing surface (6). <IMAGE>
