Abstract (en)
[origin: EP0450167A1] The invention relates to a watch having a watch case 1, the viewing orifice 2 of which is closed by a neck. Inside the watch case 1, a stay 4 is arranged so as to be rotatably driveable. In a toothed rim 5 arranged on the stay 4 engages a driving gearwheel 7 having a driving journal 8, by means of which the driving gearwheel 7 can be driven rotatably from outside the case. The stay 4 is driveable rotatably in specific angular steps and can be fixed in a catch position by a catch device engaging resiliently after an angular step has been executed. An adjusting shaft 11 which can be driven rotatably by hand is connected operatively to the driving journal 8 which can be driven rotatably by the adjusting shaft 11. <IMAGE>
