Abstract (en)

[origin: EP0450265A2] Edge lining for thin window sills, with a push-on body (10) consisting of plastic, which, with two legs (44,45) which are parallel to one another, forms a receiving slit (14) for a sill edge. In order to prevent moisture reaching the embrasure surface pointing upwards and covered by the window sill (31), the edge lining is designed in such a way that a water drainage channel (23) runs longitudinally in the leg (45) to be located under the sill (31), and this channel has a water outlet at the front end of the lining. <IMAGE>
