Abstract (en)
[origin: EP0450273A2] An air conditioner comprises a casing (30), a heat exchanger (53) of the water cooling type housed in the casing (30) to form the cooling circuit, a sprinkler (58) for sprinkling water over the water cooling heat exchanger (53), and a water tank (60) for supplying the sprinkler (58) with an amount of water which corresponds to that of water evaporated from both of the sprinkler (58) and the water cooling heat exchanger (53) as the water sprinkling of the sprinkler (58) advances. The water tank (60) includes a grip (76a) on its top, a water supply valve (79) projected downward from its bottom, and an auxiliary grip (76b) projected downward, adjacent to the water supply valve (79), from its bottom, extending the lower end thereof longer than that of the water supply valve (79). <IMAGE>
