Abstract (en)  
[origin: EP0450295A2] The invention provides a fluidising and conveying device for electrostatic powder coating equipment, which consists of a container that can be swivelled through 180 DEG on a supporting frame and of a cover on which a fluidising plate is arranged and is penetrated by a powder tube and a compressed air tube. A transportation package, for example a sack filled with powder, is inserted into the container and the container is then closed by means of the lid and swivelled through 180 DEG , whereupon the fluidising and conveying operation takes place.
