Abstract (en)

[origin: EP0450379A2] In a ring spinning machine, for the conveyance of tube-journal slides (18), supporting rails (122) are arranged along the spinning-station groups (12a, 12b) and are constructionally combined with guide rails (121). Drivers (19) for the tube-journal slides (18) are guided on the guide rails (121) displaceably in the longitudinal direction of the machine. A vertical conveyor band (17) is connected to the drivers (19), so that these are taken up during the movement of the conveyor band and thereby displace the tube-journal slides (18) on the supporting rail (22).
