Abstract (en)

[origin: EP0450626A1] What is described is a two-part hinge, of which a first hinge part (40, 41, 180) can be fastened to a lid (2) for covering an orifice, preferably of a furniture part, and a second hinge (10, 11, 100) can be fastened to an inner surface (3) limiting the orifice, the first hinge part (40, 41, 180) and the second hinge part (10, 11, 100) being coupled to one another in an articulated manner. So that the number of fitting parts necessary for a lid articulated on an orifice of a furniture part and having a shutting device and a holding-out device is reduced and therefore the mounting of the lid simplified and the storage outlay reduced, a holding-out device (54, 55, 190) for the lid (2) is formed on the first hinge part (40, 41, 180) and a shutting device (60, 61, 191; 36, 38, 39, 160) for the lid (2) is formed on the second hinge part. <IMAGE>
