Abstract (en)
A pallet assembly for more than one stack of packagings, such as boxes (D), provided with a bearing surface (1) for the stacks and a base part (5) arranged under the bearing surface for co-operation with the tines of a lifting device, for example a fork lift truck, wherein the bearing surface (1) is split into a number of carrier parts (2) corresponding with at most the number of stacks, wherein each carrier part is provided with at least three wheels (3), and which base part (5) is provided with a number of members (7) each supporting a wheel (3), said members being mutually connected by a lengthwise girder (6) guiding the carrier parts, so ensuring an easy manipulation of the packages being stacked upon the carrier parts, those being grouped upon the base part for further transportation. <IMAGE>
