Abstract (en)

[origin: EP0451544A2] The shank parts (3, 4) of a laying knife are pivotable relative to one another in the manner of scissors by means of a joint (7) for the purpose of opening and are secured, in the use position, against rotation by means of an insertion bar (31) designed as a blade magazine (40) and against spreading by means of front and rear securing devices (11, 12, 13), a rear knocking face (45) of the gripping shank is formed without joints merely by a single shank part (3). Very simple operation with high stability of the gripping shank is thereby guaranteed. <IMAGE>
