Abstract (en)

[origin: EP0451895A1] Loom roller drive system comprises control unit which is mounted on the loom and connected to the roller via a coupling. The coupling comprises a shaft end which is driven by the control unit, and a second shaft end attached to the roller. The two shaft ends are joined by a connecting piece which can move axially between them. The connecting piece joins onto shaft end via engaging threaded surfaces and to a fixed element via two other threaded surfaces.
