Abstract (en)  
The electric lamp has a tubular insulator body (5), fitted in and extending from a stemtube (3) of the lamp vessel (1). The insulator body (5) has a longitudinal cavity (7) and first (10) and second (11) radial projections. The first projections each bear a respective contact element (8) to which current supply conductors (9) extend via the central cavity (7) from an electric element (4) mounted within the lamp vessel (1). The lamp of the invention is of a simple construction and can readily be mounted into a simple holder. The lamp is suitable for use in electrical domestic appliances.
