Abstract (en)

The treatment method of the invention is applicable to a textile part (3), woven cloth, knitted fabric or made-up article, which textile part consists entirely or partly of threads of continuous filaments having adhering microfilaments, which are obtained by star-type or lamellar spinning, for example comprising six to eight individual microfilaments of 0.2 to 0.4 dtex. It consists in subjecting the said part, resting on a support grid (6), to the action of water jets having a pressure of at least 4×10^6 Pa, by means of which the structure of the part is modified and the individual microfilaments are detached. <IMAGE>
