Abstract (en)
The invention relates to tobacco pouches. The tobacco pouch according to the invention is formed by two pockets (2, 2'), each of which has two substantially rectangular plane walls connected one to the other by three of their sides and defining an aperture (8, 8') between their third sides, the said apertures (8, 8') facing each other and one of the two walls of each pocket extending one towards the other to form a wall (6), common to the two pockets and, in the closed position of the pouch, a first one of the said pockets (2) is folded upon itself towards the said common wall (6), the second of the said pockets (2') is turned over by folding against the said first pocket (2), and adhesive means are provided on the outer surface of the wall of the said first pocket (2) which is common to the two pockets. <IMAGE>
