Abstract (en)

[origin: EP0452195A1] The machine according to the invention for the sorting of capsules (36) comprises means (18, 40) for propelling the capsules between two coaxial discs (48, 50) driven at the same speed and with their mutually confronting surfaces separated by an axial distance greater than the total thickness of accepted capsules (36') which pass freely between the discs and fall into a collection chute (82), while refused capsules (36'') which are caught between the discs are removed by an ejection device (86) causing them to drop into a removal chute (92). <IMAGE>
