Abstract (en)  
[origin: EP0452744A1] The plant-accommodating protective wall with framing (1) and earth comprises structural elements which are fixed together and is normally designed for a height of up to 6 m. The protective wall is mounted on a concrete foundation (5) and comprises stays or crosspieces (2) arranged crosswise to the protective wall, which are equipped on both sides at both ends with diagonal grooves (6) to take boards (3) running in the lengthwise direction of the framing (1) to create channels for the planting earth. Distance pieces or blocks (4) are located on the upper side of each crosspiece (2), onto which a further crosspiece (2) to take further boards (3) is mounted in each case. Connection pieces (8) in the form of double-sided, round or square push-in plugs, nail plates or bulldog clips are provided to hold the blocks (4) on the crosspieces (2). The adjacent ends of two contiguous boards (3) are preferably connected together by means of steel clamps (7). <IMAGE>
