Abstract (en)

[origin: EP0453341A1] Casing for interfacing between a lock (1) of a motor vehicle, an actuator (3) and an electrical-connection cable bundle, comprising detection contactors and devices for connection, on the one hand, (2a) to the cable bundle and, on the other hand, (2b) to the actuator and provided with means for fixing to the lock and to the actuator (2c). By virtue of the fact that the interfacing casing (2) is equipped with a single connector (2a), the connection to the cable bundle of the vehicle requires only a single operation during the mounting of the lock in the door.
