Abstract (en)
[origin: US5169222A] The present invention relates to a deposit cabinet comprising a plurality of lockers, each comprising a closing door and an individual means for fastening the various doors in the closed position. According to the invention, each locking means comprises a locking mechanism, with a releasing-open member, and a centralized control system for the lockers, making it possible, on the one hand, to supply a ticket with a personal code and, on the other hand, to open a given locker by calling up in the abovementioned code on a keyboard 29.
