Abstract (en)
[origin: EP0453401A1] A height adjustable frame (1) is provided, with respect to which the inclination of a plate holder (3) may be adjusted around a support axis (H). The plate holder (3) may be pivoted with the plate (4) from its vertical resting position into a horizontal or inclined working position. The plate sections (41) may be brought into the working position with the plate (4) on the front and/or rear edge (31) by means of pivoting (S) the plate holder (33), the said sections also being pivoted about the plate axis (P) into the specifically desired display or working position. Height and inclination adjustment in this manner enables optimum adjustment of the display and work table to suit requirements. <IMAGE>
