Abstract (en)

[origin: EP0453936A2] In a glue applying device (5) for edge gluing machines with a wedge-shaped nozzle body (6) with application bores (9) for the adhesive, a follower slide (18) which rests against the nozzle body (6) is provided, said slide partially covering the application bores (9) and its follower surface (20) interacting with the plate-shaped workpiece (4). The follower slide (18) exactly matches the surface (21) of the workpiece (4) and thus controls the release of the width of adhesive as function of the height of the workpiece (4). <IMAGE>
