Abstract (en)

[origin: CA2041145A1] The invention concerns an offset printing machine. Printing cylinders (PP', PB', CC') to be used for a new run are carried by a carriage (3) into the vicinity of the printing unit (G2). The printing unit (G2) is provided with two lateral movable arms (26) expected to automatically and successively transfer every printing cylinder (PP, PB, CC) from the printing unit (G2) onto the carriage (3) and, inversely, the new cylinders (PP', PB', CC') from the carriage (3) onto the printing unit (G2).
