Abstract (en)
[origin: EP0453979A2] According to the existing prior art, the openings of the grids of electron gun systems are produced using a stamping technique. Since the required tight tolerances for these openings 13.1, 13.2, 13.3 can be implemented only by means of precision stamping machines, it is proposed according to the invention to clad the openings 13.1, 13.2, 13.3 with deep-drawn insertion sleeves 14.1, 14.2, 14.3 and to connect them fixedly to the grid 10. The extraordinarily good dimensional stability of the deep-drawn insertion sleeves 14.1, 14.2, 14.3 is not adversely affected when the connection of the grid 10 and the insertion sleeves 14.1, 14.2, 14.3 is made using a template in a laser-welding technique. <IMAGE>
