Abstract (en)

The invention relates to a device for the suspension of articles from a display rack or similar and to applications of the said device for supporting a package and/or a packaged article. According to the invention, the article to be suspended has in its upper part an orifice (10) with a closed contour and with slight thickness and the suspension device is capable of being slipped into the said orifice (10) and has means of clipping (14-17) into the said orifice (10) allowing its locking in the vertical direction and in translation with respect to the said article. <IMAGE>
