Abstract (en)

[origin: EP0455063A1] The folder consists of at least one basic body (10, 12) and at least one pocket (20-26) fixedly connected to the basic body on two sides. At least one attachment tab (46) is punched out from the sheet-like material of the pockets (20-26) or of the basic body, by means of a U-shaped punching cut, is optionally bent around a folding edge (50) and can thus be folded outwards. By means of attaching holes (48) in the attachment tabs (46), the folder can be secured inside a binder. The attachment tabs (46) can also adjoin, via a folding edge, an adhesive tab (34) which is bonded against the inside of the basic body (12) or against one or more pocket flaps (24, 26). The folding edge (50) is in each case arranged at a welded or bonded zone with an interval from the neighbouring lateral edge of the basic body (10, 12). <IMAGE>
