Abstract (en)

[origin: EP0455110A1] In a plant for electrostatically coating workpieces with electrically conductive coating material, an earthed supply system (36) and a spray device to which high voltage is constantly applied are insulated from one another by means of a filling piston (10) which can be moved up and down pneumatically in an insulating pipe (1), which piston empties the coating material into a reservoir (3) which is located in the lower part of the pipe (1) and connected to the coating device. <IMAGE>
