Abstract (en)

The invention relates to a closing device, in particular for containers of vehicles such as trucks or similar. It comprises two or more consecutively hinged rigid sheets or segments (4) and (5), the first of which, the posterior segment (4), is mounted to the container (1) by means of a group of cogged or partially cogged gearings (11) and (13) and at least one angled lever (9), said group having the function of commanding and guiding the transfer of the segments (4) and (5) from a position of hermetic closure to a completely open folded position. The activating of the angled lever (9) is performed by a hydraulic cylinder (16) which is mounted to the said posterior segment (4). <IMAGE>
