Abstract (en)

[origin: WO9008486A1] A footbed of a shoe is made of a flexible to stiff material and has a generally smooth surface (20) adapted to the sole of the foot. At least one trough-shaped local depression (22) which recedes from the (even) surface (20) is provided and opens onto this surface (20) along its entire edge with a slight curvature (24). The base (26) of the depression (22) is located inside this edge several millimetres below the even surface (20). The surface area of the depression is considerably less than the total area of the surface (20). A knob (28) which projects from the centre of the base (26) has a free tip (30) which lies essentially in line with the even surface (20).
